

Central Management Controller

IDT Management Server

The Intevi Central Management Controller provides all of the setup, management and control of the full system through an intuitive, multiuser web interface.

The server enables the configuration and management of DVB Gateway devices, Encoders and other incoming signals creating a master channel list. The set top boxes can then be configured on an

individual or group basis to receive any, or all channels from the master list.

The IDT's unique templating system allows a customer to uniquely brand the IPTV streams to send

messages or alerts to either an individual display or group of displays via the web interface or mobile application.

Central Management Controller

IDT Management Server

Unique Selling Points

- Feature rich, easy to use content management system.
- Web based full IPTV management portal for content, branding, alerts, messages etc...
- Multi user
- Mobile App Included
- Full API for 3rd party integration.
